Charge to the fMRI Laboratory Steering Committee

The charge to the fMRI Steering Committee will be the annual evaluation of unit activities and planning of the activities for the upcoming year and more broadly for the future. The Steering Committee will meet annually. Prior to this meeting the co-Directors will present the committee members with the annual report. This report will highlight accomplishments of the previous year and lay out a proposal of activities for the upcoming year and the near-term future. These accomplishments and plans will cover topics having to do with budgeting and expenses, scientific progress and plans, existing and predicted grant support, outcomes of pilot research conducted in the facility, development work conducted on the scanner, and educational accomplishments and proposals. The Steering Committee will deliberate about each of these matters with the aim of evaluating activities of the prior year and making recommendations for the next year and beyond. We envision this meeting as a sort of annual retreat during which the fMRI Laboratory will take stock of its current position and plan its strategy for the immediate future.
